Detailed cultivation aspects vary depending on climate, location, time of year and environmental conditions. Benary expressly disclaims any responsibility for the content of such data/information and makes no representation or warranty for the cultivation of any products listed. It is recommended that growers conduct a trial of products under their own conditions.

Crop Time	Frühjahr: 12 - 14 Wochen
Höhe ☞	90 cm
Breite ☞	50 cm
Standort	Sun - Partial shade
Seed Form	ApeX
Best Uses	Landschaft

KULTURANLEITUNG

Verbena bonariensis Vanity

Verwendung

Border plant, containers, landscape – ideal for mixtures

Kornablage

3-5 seeds per plug for 12-19 cm pots, 1-2 seeds per plug for 9-12 cm pots, direct sowing is also possible. Cover the seeds thinly with vermiculite.

Keimbedingung

Maintain optimal conditions for seedling development, should begin on the day of sowing until root emergence. Expect the emergence of the first seedlings after 14 days. Avoid a high humidity.

Topfen

Facultative long day plant, flowering more quickly under a long day length. Typical cultivation as a flowering annual that flowers from June to late october.

Medien

Use a well-drained, pre-fertilized growing substrate with 20-30 % clay. pH 5.8-6.2; E.C. 1.2-1.5. In field Verbena likes a humus, sandy-loamy soil with good drainage

Temperatur

20-22 °C for germinating. The seedlings should be grown at an average temperature of 18 °C.

Düngung

Verbena requires a high fertilization level with a weekly dose of nitrogen. Also a good potassium level is important. But avoid high ammonium or nitrogen levels during the growing.
